DETAILED ACTION

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "gain stage" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1, 4, 9, 13, 14, 15, 21, 24, 29, 33, 34, 37, 42, 46 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is not clear from the drawings which "gain stage" is intended. As best understood by the examiner, an output node (336A/336B) is coupled between input transistor (310/312) and a programmable resistance (T1, T2 and R1), and not "gain stage" as claimed.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000.

Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 4, 24, 37 are rejected under 35 U.S.C. 102(e) as being anticipated by Tanji et al. (6,583,661) or Yang (6,563,382), which are already cited in the First Office Action (11/02/04).

Tanji et al. (Fig. 4) disclose an amplifier circuit comprising: a differential pair (308, 310), a transistor (330/332) operable as a switch in parallel with a resistor (314/316) can be read as a programmable resistance; and an output node (320) coupled between the transistor (330/332) and the programmable resistance, wherein the switch (330/332) can be configured to operate as claimed invention.

Yang (Fig. 3) discloses a variable gain amplifier comprising: a differential pair (Q1, Q2), a transistor (M1/M2) operable as a switch in parallel with a resistor (R1/R2) can be read as a programmable resistance; and an output node (VOUTP, VOUTN) coupled between the transistor (M1/M2) and the programmable resistance, wherein the switch (M1/M2) can be configured to operate as claimed invention.

Allowable Subject Matter

Claims 1, 3, 5-10, 12-15, 17-20, 23, 25-30, 32-34, 36, 38-43, 45, 46 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

Claims 1, 3, 5-10, 12-15, 17-20, 23, 25-30, 32-34, 36, 38-43, 45, 46 call for, among others, a plurality of switches in parallel with a resistive element having the connections thereof.
